

v1.1.2

RELEASE NOTES

(v1.1.2 – August 17, 2026)

A separate installation guide is available with the installation download link:

<https://streamline.tech/stormwise-download-links-and-resources-v1>

The release includes a few enhancements and fixes.

*Please note: StormWise™ v4.08.07 and later versions require the use of the **StormWise™ Access Manager**, a new standalone desktop application designed to manage licenses for StormWise™ software products. The license management functionality has been decoupled from the main StormWise™ desktop application to provide greater flexibility, security, and centralized control over license activation and usage.*

Enhancements

- Added support for selecting between multiple saved licenses when more than one license is available.
- Added display of the StormWise™ Access Manager version number throughout the application.
- Improved license validation and loading to better handle different system and license configurations.
- Improved version reporting for license management and support purposes.

Fixes

- Expanded previous reliability improvements to address additional cases where StormWise™ could fail to launch after a successful StormWise™ Access Manager login.
